# Author index for papers in Volume 44

*Pages are numbered consecutively through the volume: 1–308, January/March; 309–452, May; 453–660, July; 661–796, September; and 797–972, November.*

**Acoff, V. L.,** and R. G. Thompson
668 *Characterization of constitutional liquid film migration in nickel-base alloy 718*

**Alexander, W. E.,** D. S. Reeves, and C. S. Gloster, Jr.
681 *Parallel image processing with the block data parallel architecture*

**Allen, D. H.,** S. H. Dhong, H. P. Hofstee, J. Leenstra, K. J. Nowka, D. L. Stasiak, and D. F. Wendel
799 *Custom circuit design as a driver of microprocessor performance*

**Allenspach, R.**
553 *Spin-polarized scanning electron microscopy*

**Amdahl, G. M.,** G. A. Blaauw, and F. P. Brooks, Jr.
21 *Architecture of the IBM System/360*

**Ames, I.,** F. M. d'Heurle, and R. E. Horstmann
89 *Reduction of electromigration in aluminum films by copper doping*

**Anders, S.**
535 see Stöhr, J.

**Arkun, Y.**
725 see Hernández, E.

**Ashley, J.,** M.-P. Bernal, G. W. Burr, H. Coufal, H. Guenther, J. A. Hoffnagle, C. M. Jefferson, B. Marcus, R. M. Macfarlane, R. M. Shelby, and G. T. Sincerbox
341 *Holographic data storage*

**Balcarcel, R. R.**
770 see Nyberg, G. B.

**Batson, P. E.**
477 *Atomic resolution analytical microscopy*

**Bennett, Charles H.**
270 *Notes on the history of reversible computation*

**Bernal, M.-P.**
341 see Ashley, J.

**Best, J. S.**
311 see Thompson, D. A.

**Binnig, G.,** and H. Rohrer
279 *Scanning tunneling microscopy*

**Binnig, G. K.**
323 see Vettiger, P.

**Blaauw, G. A.**
21 see Amdahl, G. M.

**Borkenhagen, J. M.,** R. J. Eickemeyer, R. N. Kalla, and S. R. Kunkel
885 *A multithreaded PowerPC processor for commercial servers*

**Brand, Daniel**
157 see Darringer, John A.

**Brooks, F. P., Jr.**
21 see Amdahl, G. M.

**Burr, G. W.**
341 see Ashley, J.

**Buturla, E. M.,** P. E. Cottrell, B. M. Grossman, and K. A. Salsburg
142 *Finite-element analysis of semiconductor devices: The FIELDAY program*

**Carter, P. H., II,** D. J. Pines, and L. v. Rudd
703 *Approximate performance of periodic hypersonic cruise trajectories for global reach*

**Celi, R.**
748 see Jones, C. T.

**Clementi, Enrico**
228 *Ab initio computations in atoms and molecules*

**Cocke, John,** and V. Markstein
48 *The evolution of RISC technology at IBM*

**Copel, M.**
571 *Medium-energy ion scattering for analysis of microelectronic materials*

**Coppersmith, D.**
246 *Cryptography*

**Corning, J. J.**
56 see Davis, E. M.

**Cottrell, P. E.**
142 see Buturla, E. M.

**Coufal, H.**
341 see Ashley, J.

**Critchlow, D. L.,** R. H. Dennard, and S. E. Schuster
70 *Design and characteristics of n-channel insulated-gate field-effect transistors*

**Crumpton, L.**
759 see McCauley Bell, P.

**d'Heurle, F. M.**
89 see Ames, I.

**Darringer, John A.,** Daniel Brand, John V. Gerbi, William H. Joyner, Jr., and Louise Trevillyan
157 *LSS: A system for production logic synthesis*

**Davis, E. M.,** W. E. Harding, R. S. Schwartz, and J. J. Corning
56 *Solid Logic Technology: Versatile, high-performance microelectronics*

**Dennard, R. H.**
70 see Critchlow, D. L.

**Despont, M.**
323 see Vettiger, P.

**Dhong, S. H.**
799 see Allen, D. H.

**Dickinson, W. E.**
16 see Noyes, T.

**Dietrich, W.,** W. E. Proebster, and P. Wolf
167 *Nanosecond switching in thin magnetic films*

**Drayton, R. F.,** R. M. Henderson, and L. P. B. Katehi
715 *Monolithic packaging concepts for high isolation in circuits and antennas*

**Drechsler, U.**
323 see Vettiger, P.

**Dürig, U.**
323 see Vettiger, P.

**Eickemeyer, R. J.**
885 see Borkenhagen, J. M.

**Eickemeyer, R. J.**
851 see Kunkel, S. R.

**Elmroth, E.** and F. G. Gustavson
605 *Applying recursion to serial and parallel* QR *factorization leads to better performance*

**Follstad, B. D.**
770 see Nyberg, G. B.

**Gerbi, John V.**
157 see Darringer, J. A.

**Gloster, C. S., Jr.**
681 see Alexander, W. E.

**Grossman, B. M.**
142 see Buturla, E. M.

**Guenther, H.**
341 see Ashley, J.

**Gustavson, F. G.,** and I. Jonsson
823 *Minimal-storage high-performance Cholesky factorization via blocking and recursion*

**Gustavson, F. G.**
605 see Elmroth, E.

**Haanstra, J. W.**
6 see Lesser, M. L.

**Häberle, W.**
323 see Vettiger, P.

**Harding, W. E.**
56 see Davis, E. M.

**Henderson, R. M.**
715 see Drayton, R. F.

**Herman, D. A., Jr.**
186 see Speriosu, V. S.

**Hernández, E.,** and Y. Arkun
725 *Stability of nonlinear polynomial ARMA models and their inverse*

**Hoagland, A. S.**
175 *A high track-density servo-access system for magnetic recording disk storage*

**Hoffnagle, J. A.**
341 see Ashley, J.

**Hofstee, H. P.**
799 see Allen, D. H.

**Horstmann, R. E.**
89 see Ames, I.

**Isaac, R. D.**
369 *The future of CMOS technology*

**Ito, H.**
119 *Chemical amplification resists: History and development within IBM*

**Jefferson, C. M.**
341 see Ashley, J.

**Jones, C. T.,** and R. Celi
748 *Frequency response sensitivity functions for helicopter frequency domain system identification*

**Jonsson, I.**
823 see Gustavson, F. G.

**Jordan-Sweet, J. L.**
457 *Synchrotron X-ray scattering techniques for microelectronics-related materials studies*

**Joyner, William H., Jr.**
157 see Darringer, John A.

**Kalla, R. N.**
885 see Borkenhagen, J. M.

**Kash, J. A.**
583 see Tsang, J. C.

**Katehi, L. P. B.**
715 see Drayton, R. F.

**Keyes, R. W.**
84 *Miniaturization of electronics and its limits*

**Koenig, H. R.,** and L. I. Maissel
106 Application of rf discharges to sputtering

**Kunkel, S. R.,** R. J. Eickemeyer, M. H. Lipasti, T. J. Mullins, B. O'Krafka, H. Rosenberg, S. P. VanderWiel, P. L. Vitale, and L. D. Whitley
851 *A performance methodology for commercial servers*

**Kunkel, S. R.**
885 see Borkenhagen, J. M.

**Landauer, R.**
261 *Irreversibility and heat generation in the computing process*

**Landauer, R.**
251 *Spatial variation of currents and fields due to localized scatterers in metallic conduction*

**Leenstra, J.**
799 see Allen, D. H.

**Lesser, M. L.,** and J. W. Haanstra
6 *The Random-Access Memory Accounting Machine I. System organization of the IBM 305*

**Lipasti, M. H.**
851 see Kunkel, S. R.

**Ludeke, R.**
517 *Hot-electron effects and oxide degradation in MOS structures studied with ballistic electron emission microscopy*

**Lutwyche, M. I.**
323 see Vettiger, P.

**Macfarlane, R. M.**
341 see Ashley, J.

**Maissel, L. I.**
106 see Koenig, H. R.

**Marcus, B.**
341 see Ashley, J.

**Markstein, V.**
48 see Cocke, John

**McCauley Bell, P.,** and L. Crumpton
759 *A fuzzy linguistic model for the prediction of carpal tunnel syndrome risks in an occupational environment*

**Meyerson, B. S.**
132 *Low-temperature Si and Si:Ge epitaxy by ultrahigh vacuum/chemical vapor deposition: Process fundamentals*

**Meyerson, B. S.**
391 *Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications*

**Miller, L. F.**
93 *Controlled collapse reflow chip joining*

**Mullins, T. J.**
851 see Kunkel, S. R.

**Nowka, K. J.**
799 see Allen, D. H.

**Noyes, T.,** and W. E. Dickinson
16 *The Random-Access Memory Accounting Machine II. The magnetic-disk, random-access memory*

**Nyberg, G. B.,** R. R. Balcarcel, B. D. Follstad, G. Stephanopoulos, and D. I. C. Wang
770 *Metabolic effects on recombinant interferon-γ glycosylation in continuous culture of Chinese hamster ovary cells*

**O'Connell, F. P.,** and S. W. White
873 *POWER3: The next generation of PowerPC processors*

**O'Krafka, B.**
851 see Kunkel, S. R.

**Pines, D. J.**
703 see Carter, P. H., II

**Proebster, W. E.**
167 see Dietrich, W.

**Radin, George**
37 *The 801 minicomputer*

**Reeves, D. S.**
681 see Alexander, W. E.

**Ritsko, J. J.**
409 see Wisnieff, R. L.

**Rohrer, H.**
279 see Binnig, G.

**Rosenberg, H.**
851 see Kunkel, S. R.

**Ross, F. M.**
489 *Growth processes and phase transformations studied by* in situ *transmission electron microscopy*

**Rothuizen, H. E.**
323 see Vettiger, P.

**Rudd, L. v.**
703 see Carter, P. H., II

**Salsburg, K. A.**
142 see Buturla, E. M.

**Samuel, A. L.**
206 *Some studies in machine learning using the game of checkers*

**Sanders, I. L.**
186 see Speriosu, V. S.

**Sanford, J. L.**
909 see Schlig, E. S.

**Saroit Ismail, I. A.**
919 *Bandwidth problems in high-speed networks*

**Schlig, E. S.,** and J. L. Sanford
909 *An SXGA reflective liquid crystal projection light valve incorporating inversion by pixel bootstrapping*

**Schuster, S. E.**
70 see Critchlow, D. L.

**Schwartz, R. S.**
56 see Davis, E. M.

**Shelby, R. M.**
341 see Ashley, J.

**Sincerbox, G. T.**
341 see Ashley, J.

**Sorokin, P. P.**
294 *Contributions of IBM to laser science—1960 to the present*

**Speriosu, V. S.,** D. A. Herman, Jr., I. L. Sanders, and T. Yogi
186 *Magnetic thin films in recording technology*

**Stapper, C. H.**
112 *LSI yield modeling and process monitoring*

**Stasiak, D. L.**
799 see Allen, D. H.

**Stephanopoulos, G.**
770 see Nyberg, G. B.

**Stöhr, J.,** and S. Anders
535 *X-ray spectro-microscopy of complex materials and surfaces*

**Stutz, R.**
323 see Vettiger, P.

**Theis, T. N.**
379 *The future of interconnection technology*

**Thompson, D. A.,** and J. S. Best
311 *The future of magnetic data storage technology*

**Thompson, R. G.**
668 see Acoff, V. L.

**Trevillyan, Louise**
157 see Darringer, John A.

**Tromp, R. M.**
503 *Low-energy electron microscopy*

**Tsang, J. C.,** J. A. Kash, and D. P. Vallett
583 *Picosecond imaging circuit analysis*

**Vallett, D. P.**
583 see Tsang, J. C.

**VanderWiel, S. P.**
851 see Kunkel, S. R.

**Vettiger, P.,** M. Despont, U. Drechsler, U. Dürig, W. Häberle, M. I. Lutwyche, H. E. Rothuizen, R. Stutz, R. Widmer, and G. K. Binnig
323 *The "Millipede"—More than one thousand tips for future AFM storage*

**Vitale, P. L.**
851 see Kunkel, S. R.

**Wang, D. I. C.**
770 see Nyberg, G. B.

**Webb, C. F.**
899 *S/390 microprocessor design*

**Wendel, D. F.**
799 see Allen, D. H.

**White, S. W.**
873 see O'Connell, F. P.

**Whitley, L. D.**
851 see Kunkel, S. R.

**Widmer, R.**
323 see Vettiger, P.

**Wisnieff, R. L.,** and J. J. Ritsko
409 *Electronic displays for information technology*

**Wolf, P.**
167 see Dietrich, W.

**Yogi, T.**
186 see Speriosu, V. S.

# Subject index for papers in Volume 44

*Each index entry below is accompanied by an author's name and a page number; the author index contains the title of the paper and the names of coauthors, if any.*

| Subject | Author | Page |
|---|---|---|
| *Aerodynamics* | | |
| Approximate performance of periodic hypersonic cruise trajectories for global reach | Carter | 703 |
| Frequency response sensitivity functions for helicopter frequency domain system identification | Jones | 748 |
| *Algorithms* | | |
| Applying recursion to serial and parallel *QR* factorization leads to better performance | Elmroth | 605 |
| Finite-element analysis of semiconductor devices: The FIELDAY program | Buturla | 142 |
| Minimal-storage high-performance Cholesky factorization via blocking and recursion | Gustavson | 823 |
| *Alloys* | | |
| Characterization of constitutional liquid film migration in nickel-base alloy 718 | Acoff | 668 |
| Nanosecond switching in thin magnetic films | Dietrich | 167 |
| *Aluminum* | | |
| Reduction of electromigration in aluminum films by copper doping | Ames | 89 |
| *Analytical models* | | |
| Finite-element analysis of semiconductor devices: The FIELDAY program | Buturla | 142 |
| *Arithmetic and logical unit design* | | |
| A multithreaded PowerPC processor for commercial servers | Borkenhagen | 885 |
| POWER3: The next generation of PowerPC processors | O'Connell | 873 |
| *Artificial intelligence* | | |
| Some studies in machine learning using the game of checkers | Samuel | 206 |
| *ASICs* | | |
| Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications | Meyerson | 391 |
| *Atomic force microscopy (AFM)* | | |
| The "Millipede"—More than one thousand tips for future AFM storage | Vettiger | 323 |
| *Biotechnology* | | |
| Metabolic effects on recombinant interferon-$\gamma$ glycosylation in continuous culture of Chinese hamster ovary cells | Nyberg | 770 |
| *Carrier transport in small structures* | | |
| Spatial variation of currents and fields due to localized scatterers in metallic conduction | Landauer | 251 |
| *Checkers and chess* | | |
| Some studies in machine learning using the game of checkers | Samuel | 206 |
| *Chemical vapor deposition* | | |
| Low-temperature Si and Si:Ge epitaxy by ultrahigh-vacuum/chemical vapor deposition: Process fundamentals | Meyerson | 132 |
| *Chemistry and chemical engineering* | | |
| Chemical amplification resists: History and development within IBM | Ito | 119 |
| *Circuit and device technology* | | |
| Custom circuit design as a driver of microprocessor performance | Allen | 799 |
| Design and characteristics of n-channel insulated-gate field-effect transistors | Critchlow | 70 |

LSI yield modeling and process monitoring — Stapper — 112
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson — 391
The future of CMOS technology — Isaac — 369
The future of interconnection technology — Theis — 379

*CMOS*
Picosecond imaging circuit analysis — Tsang — 583
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson — 391
The future of CMOS technology — Isaac — 369

*Codes and coding*
Holographic data storage — Ashley — 341

*Communication theory*
Notes on the history of reversible computation — Bennett — 270

*Communications and communication networks*
Bandwidth problems in high-speed networks — Saroit Ismail — 919

*Compilers and interpreters*
The 801 minicomputer — Radin — 37

*Computational methods*
Applying recursion to serial and parallel *QR* factorization leads to better performance — Elmroth — 605
Minimal-storage high-performance Cholesky factorization via blocking and recursion — Gustavson — 823

*Computer architecture*
A multithreaded PowerPC processor for commercial servers — Borkenhagen — 885
POWER3: The next generation of PowerPC processors — O'Connell — 873
S/390 microprocessor design — Webb — 899
The 801 minicomputer — Radin — 37

*Computer organization and design*
A multithreaded PowerPC processor for commercial servers — Borkenhagen — 885
A performance methodology for commercial servers — Kunkel — 851
POWER3: The next generation of PowerPC processors — O'Connell — 873
S/390 microprocessor design — Webb — 899
The 801 minicomputer — Radin — 37

*Computer-aided design*
The evolution of RISC technology at IBM — Cocke — 48

*Computers*
Irreversibility and heat generation in the computing process — Landauer — 261

*Control theory and systems*
Stability of nonlinear polynomial ARMA models and their inverse — Hernández — 725

*Controlled-collapse chip connection (C-4) technology*
Controlled collapse reflow chip joining — Miller — 93

*Copper*
The future of interconnection technology — Theis — 379

*Cryptography*
Cryptography — Coppersmith — 246

*Data transmission*
Bandwidth problems in high-speed networks — Saroit Ismail — 919

*Data, structures and accessing*
Applying recursion to serial and parallel *QR* factorization leads to better performance — Elmroth — 605
Holographic data storage — Ashley — 341
Minimal-storage high-performance Cholesky factorization via blocking and recursion — Gustavson — 823
The future of magnetic data storage technology — Thompson — 311
The "Millipede"—More than one thousand tips for future AFM storage — Vettiger — 323

*Design automation*
LSS: A system for production logic synthesis — Darringer — 157

*Device design*
Custom circuit design as a driver of microprocessor performance — Allen — 799
The future of CMOS technology — Isaac — 369

*Dielectrics*
The future of CMOS technology — Isaac — 369

*Digital computers*
Some studies in machine learning using the game of checkers — Samuel — 206
The Random-Access Memory Accounting Machine: I. System organization of the IBM 305 — Lesser — 6
The Random-Access Memory Accounting Machine: II. The magnetic-disk, random-access memory — Noyes — 16

*Display technology*
An SXGA reflective liquid crystal projection light valve incorporating inversion by pixel bootstrapping — Schlig — 909
Electronic displays for information technology — Wisnieff — 409

*Electrical conduction*
Spatial variation of currents and fields due to localized scatterers in metallic conduction — Landauer — 251

*Electron microscopy*
Atomic resolution analytical microscopy — Batson — 477
Growth processes and phase transformations studied by *in situ* transmission electron microscopy — Ross — 489
Low-energy electron microscopy — Tromp — 503
Spin-polarized scanning electron microscopy — Allenspach — 553

*Fabrication*
Controlled collapse reflow chip joining — Miller — 93

Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson 391
The future of CMOS technology — Isaac 369

*Films*
Application of rf discharges to sputtering — Koenig 106
Reduction of electromigration in aluminum films by copper doping — Ames 89

*Films, epitaxy*
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson 391

*Films, magnetic*
Magnetic thin films in recording technology — Dietrich 167
Nanosecond switching in thin magnetic films — Speriosu 186
Spin-polarized scanning electron microscopy — Allenspach 553

*Films, semiconductor*
Low-temperature Si and Si:Ge epitaxy by ultrahigh-vacuum/chemical vapor deposition: Process fundamentals — Meyerson 132
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson 391

*Films, thin*
Magnetic thin films in recording technology — Speriosu 186
Nanosecond switching in thin magnetic films — Dietrich 167

*Game theory*
Some studies in machine learning using the game of checkers — Samuel 206

*Germanium*
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson 391

*Holography*
Holographic data storage — Ashley 341

*I/O devices, systems, and technology*
An SXGA reflective liquid crystal projection light valve incorporating inversion by pixel bootstrapping — Schlig 909

*IBM SAGE system*
The Random-Access Memory Accounting Machine: II. The magnetic-disk, random-access memory — Noyes 16

*IBM System/360*
Architecture of the IBM System/360 — Amdahl 21
Solid Logic Technology: Versatile, high-performance microelectronics — Davis 56

*IBM System/390 Parallel Enterprise Server*
S/390 microprocessor design — Webb 899

*IBM 305 (RAMAC)*
The Random-Access Memory Accounting Machine: I. System organization of the IBM 305 — Lesser 6

*IBM 350 (RAMAC)*
The Random-Access Memory Accounting Machine: II. The magnetic-disk, random-access memory — Noyes 16

*Image processing*
Parallel image processing with the block data parallel architecture — Alexander 681
Scanning tunneling microscopy — Binnig 279

*Imaging technology*
Electronic displays for information technology — Wisnieff 409

*Information technology*
Electronic displays for information technology — Wisnieff 409

*Instrumentation*
The "Millipede"—More than one thousand tips for future AFM storage — Vettiger 323

*Insulators*
Application of rf discharges to sputtering — Koenig 106

*Integrated circuit design*
Custom circuit design as a driver of microprocessor performance — Allen 799

*Integrated circuits*
Picosecond imaging circuit analysis — Tsang 583
Solid Logic Technology: Versatile, high-performance microelectronics — Davis 56
The future of CMOS technology — Isaac 369
The future of interconnection technology — Theis 379

*Interconnection technology*
The future of interconnection technology — Theis 379

*Lasers*
Contributions of IBM to laser science—1960 to the present — Sorokin 294

*Light*
Holographic data storage — Ashley 341

*Liquid crystals*
An SXGA reflective liquid crystal projection light valve incorporating inversion by pixel bootstrapping — Schlig 909
Electronic displays for information technology — Wisnieff 409

*Lithography*
Chemical amplification resists: History and development within IBM — Ito 119
Low-energy electron microscopy — Tromp 503
The future of CMOS technology — Isaac 369

*Logic design and technology*
LSS: A system for production logic synthesis — Darringer 157
The future of CMOS technology — Isaac 369

*Logic synthesis*
LSS: A system for production logic synthesis — Darringer 157

*Magnetic head-disk interaction*
A high track-density servo-access system for magnetic recording disk storage — Hoagland 175

*Magnetic recording*
Magnetic thin films in recording technology — Speriosu 186

*Magnetics—studies and structures*
Nanosecond switching in thin magnetic films — Dietrich 167
The future of magnetic data storage technology — Thompson 311

*Magnetoresistance*
The future of magnetic data storage technology — Thompson 311

*Materials*
Medium-energy ion scattering for analysis of microelectronic materials — Copel 571
Scanning tunneling microscopy — Binnig 279
X-ray spectro-microscopy of complex materials and surfaces — Stöhr 535

*Materials technology*
Controlled collapse reflow chip joining — Miller 93
Holographic data storage — Ashley 341
Reduction of electromigration in aluminum films by copper doping — Ames 89

*Mathematical functions and techniques*
Applying recursion to serial and parallel *QR* factorization leads to better performance — Elmroth 605
Minimal-storage high-performance Cholesky factorization via blocking and recursion — Gustavson 823

*Mathematics*
Cryptography — Coppersmith 246

*Mathematics (applied)*
Ab initio computations in atoms and molecules — Clementi 228

*Mechanical design*
Scanning tunneling microscopy — Binnig 279

*Medicine and medical electronics*
A fuzzy linguistic model for the prediction of carpal tunnel syndrome risks in an occupational environment — McCauley Bell 759

*Memory, random-access*
The Random-Access Memory Accounting Machine: I. System organization of the IBM 305 — Lesser 6
The Random-Access Memory Accounting Machine: II. The magnetic-disk, random-access memory — Noyes 16

*Mesoscopic phenomena*
Spatial variation of currents and fields due to localized scatterers in metallic conduction — Landauer 251

*Metallurgy*
Characterization of constitutional liquid film migration in nickel-base alloy 718 — Acoff 668
Controlled collapse reflow chip joining — Miller 93
Reduction of electromigration in aluminum films by copper doping — Ames 89
The future of interconnection technology — Theis 379

*Microelectronics*
Atomic resolution analytical microscopy — Batson 477
Custom circuit design as a driver of microprocessor performance — Allen 799
Design and characteristics of n-channel insulated-gate field-effect transistors — Critchlow 70
Growth processes and phase transformations studied by *in situ* transmission electron microscopy — Ross 489
Low-energy electron microscopy — Tromp 503
Medium-energy ion scattering for analysis of microelectronic materials — Copel 571
Miniaturization of electronics and its limits — Keyes 84
Monolithic packaging concepts for high isolation in circuits and antennas — Drayton 715
Synchrotron X-ray scattering techniques for microelectronics-related materials studies — Jordan-Sweet 457

*Micromachining*
The "Millipede"—More than one thousand tips for future AFM storage — Vettiger 323

*Microprocessor systems and applications*
A multithreaded PowerPC processor for commercial servers — Borkenhagen 885
A performance methodology for commercial servers — Kunkel 851
Custom circuit design as a driver of microprocessor performance — Allen 799
Minimal-storage high-performance Cholesky factorization via blocking and recursion — Gustavson 823
POWER3: The next generation of PowerPC processors — O'Connell 873
S/390 microprocessor design — Webb 899

*Models and modeling*
A fuzzy linguistic model for the prediction of carpal tunnel syndrome risks in an occupational environment — McCauley Bell 759
A performance methodology for commercial servers — Kunkel 851
Approximate performance of periodic hypersonic cruise trajectories for global reach — Carter 703
Finite-element analysis of semiconductor devices: The FIELDAY program — Buturla 142
Frequency response sensitivity functions for helicopter frequency domain system identification — Jones 748
Stability of nonlinear polynomial ARMA models and their inverse — Hernández 725

*Nanoscale structures and devices*
The "Millipede"—More than one thousand tips for future AFM storage — Vettiger 323

*Networks*
Bandwidth problems in high-speed networks — Saroit Ismail 919

*Optical interconnections*
The future of interconnection technology — Theis 379

*Optical lithography*
Chemical amplification resists: History and development within IBM — Ito 119

*Optical science and technology*
Holographic data storage — Ashley 341

*Optics*
Holographic data storage — Ashley 341

*Packaging*
Monolithic packaging concepts for high isolation in circuits and antennas — Drayton 715
Solid Logic Technology: Versatile, high-performance microelectronics — Davis 56

*Pattern recognition*
Holographic data storage — Ashley 341

*Performance analysis*
A performance methodology for commercial servers — Kunkel 851

*Photo-processes*
Chemical amplification resists: History and development within IBM — Ito 119

*Photoemission*
X-ray spectro-microscopy of complex materials and surfaces — Stöhr 535

*Photoresists*
Chemical amplification resists: History and development within IBM — Ito 119

*Physics*
Contributions of IBM to laser science—1960 to the present — Sorokin 294
Holographic data storage — Ashley 341

*Physics, solid state*
LSI yield modeling and process monitoring — Stapper 112
Scanning tunneling microscopy — Binnig 279
Spatial variation of currents and fields due to localized scatterers in metallic conduction — Landauer 251
The future of interconnection technology — Theis 379
The future of magnetic data storage technology — Thompson 311

*Programming, programs, and programming languages*
Some studies in machine learning using the game of checkers — Samuel 206

*Quantum theory and effects*
Ab initio computations in atoms and molecules — Clementi 228

*Reduced-instruction-set computers (RISC)*
POWER3: The next generation of PowerPC processors — O'Connell 873
The evolution of RISC technology at IBM — Cocke 48
The 801 minicomputer — Radin 37

*Scanning tunneling microscopy*
Hot-electron effects and oxide degradation in MOS structures studied with ballistic electron emission microscopy — Ludeke 517
Scanning tunneling microscopy — Binnig 279

*Semiconductor devices*
Controlled collapse reflow chip joining — Miller 93
Design and characteristics of n-channel insulated-gate field-effect transistors — Critchlow 70
Finite-element analysis of semiconductor devices: The FIELDAY program — Buturla 142
Hot-electron effects and oxide degradation in MOS structures studied with ballistic electron emission microscopy — Ludeke 517

*Semiconductor technology*
Low-temperature Si and Si:Ge epitaxy by ultrahigh-vacuum/chemical vapor deposition: Process fundamentals — Meyerson 132
The future of CMOS technology — Isaac 369

*Signal processing*
Parallel image processing with the block data parallel architecture — Alexander 681

*Silicon*
The future of CMOS technology — Isaac 369

*Silicon dioxide*
Hot-electron effects and oxide degradation in MOS structures studied with ballistic electron emission microscopy — Ludeke 517

*Solid logic technology*
Solid Logic Technology: Versatile, high-performance microelectronics — Davis 56

*Spectroscopy*
X-ray spectro-microscopy of complex materials and surfaces — Stöhr 535

*Sputtering*
Application of rf discharges to sputtering — Koenig 106

*Storage (computer) devices and systems*
A high track-density servo-access system for magnetic recording disk storage — Hoagland 175
Holographic data storage — Ashley 341
The future of magnetic data storage technology — Thompson 311
The "Millipede"—More than one thousand tips for future AFM storage — Vettiger 323

The Random-Access Memory Accounting Machine: I. System organization of the IBM 305 — Lesser — 6
The Random-Access Memory Accounting Machine: II. The magnetic-disk, random-access memory — Noyes — 16

*Surface science*
Scanning tunneling microscopy — Binnig — 279

*Transistors*
Design and characteristics of n-channel insulated-gate field-effect transistors — Critchlow — 70
The future of CMOS technology — Isaac — 369

*Transistors, bipolar*
Silicon:germanium-based mixed-signal technology for optimization of wired and wireless telecommunications — Meyerson — 391

*X-ray diffraction*
Synchrotron X-ray scattering techniques for microelectronics-related materials studies — Jordan-Sweet — 457
